

connected – by design schülke introduces **euxyl® K 940**

Consumers want products that are effective, but are also safe and sustainable. **euxyl® K 940** bridges the gap between science and nature to be the perfect protection for formulations. The best of both worlds, **euxyl® K 940** from schülke contains a sophisticated, balanced spectrum of mild actives, which offer peerless protection. **euxyl® K 940** contains an intelligent combination of preservative actives with the emollient and booster, ethylhexylglycerin, to deliver a product of superior performance for a wide range of formulation types. It can be used at low levels when formulating products for sensitive skin. Hard-to-preserve systems can be formulated using higher levels without the danger of exceeding regulatory limits.

euxyl® K 940 is globally approved, virtually colorless, with a very low odor. It is stable to hydrolysis and pH and can be used in most formulation types.

Visit us at NY SCC Suppliers' Day booth #1351 or contact www.schulke-us.com/PR516 for more information.
